

LEED® Credit Information

MR Credit 3: Materials Reuse

Durability is a primary attribute of Skatelite. Skatelite will last a lifetime – whether it stays in its original installation or is re-fabricated into another project. Skatelite can be easily refinished to its original appearance.

MR Credit 4: Recycled Content

All Northwest Collection is available in 100% post consumer waste fibers. Skatelite's r50 product contains 50% of fiber from post consumer waste.

MR Credit 5: Regional Materials

Skatelite products are manufactured in Tacoma, Washington. Skatelite's r50 and r100 paper suppliers and Skatelite's resin supplier are within 200 miles of the manufacturing plant.

MR Credit 7: Certified Wood

Use a Skatelite FSC® Certified product and apply it to two points, not just one. 30% of Skatelite's FSC® Certified product uses eucalyptus fibers (a rapidly renewable material under MR Credit 6).

IEQ Credit 4.4: Low-Emitting Materials: Composite Wood & Agrifiber Products

Skatelite contains no urea formaldehyde. In addition, all Skatelite products are GREENGUARD Certified for Children & Schools – the highest rating GREENGUARD supplies. Also note that 100% of the VOC's created during manufacturing are destroyed.

ID Credit 1: Innovation in Design

Skatelite has seen its material used in some very unique and sustainable ways in building projects. Skatelite will provide the form... you provide the function.
